

# Hybrid Collaboration Exercise

| **tedco**

# Summary & Learning goals

In this exercise, the students practice the concepts and relevant factors in designing technologies for hybrid collaboration. This involves, recognising and describe these aspects in a technology for hybrid collaboration through analysis, then re-design the technology by integrating these aspects in alternative designs, and finally reflect on the consequences of the re-design.

Learning goals:

- recognize hybrid collaboration aspects in technologies
- describe relevant hybrid collaboration aspects of technologies in oral and visual form.
- analyse and integrate hybrid collaboration aspects in the design of technologies.
- reflect on consequences of technologies on the hybrid collaboration.

# Exercise (individual or group)

Choose a hybrid collaboration technology that you have access to.

1. Analyse the technology in regards to:
  - mix synchronous and asynchronous tasks,
  - span multiple applications and devices,
  - at least two people are in the same place and some remote,
  - hybrid informal collegiality,
  - spontaneous breakout of subgroups,
  - social cues,
  - awareness,
  - possibility for spontaneous and serendipitous engagements,
  - primary room dominance
  - shared reference point
2. Identify aspects for improvement
3. Come up with ideas for alternative designs where one or several of these identified aspects for improvement are integrated
4. Reflect on consequences of the alternative designs of the collaborative technology on the hybrid collaboration

Present in class:

- One slide for the analysis
- One slide for the aspects of improvement
- One slide for ideas for alternative design
- One slide with reflections on consequences of one of the alternative designs
